SUMMARY

Analyst with 1+ year of experience in business analysis, BI reporting, and applied AI development at Sveltoz Solutions. Combines strong requirement-gathering and stakeholder management fundamentals (BRD/FRD, UAT, Agile delivery) with hands-on GenAI and machine learning build experience — including a production RAG-based HR assistant and contributions to an AI-powered, multi-agent HRMS platform. Comfortable operating across the business-technical boundary: translating requirements into working systems using Power BI, SQL, Python, and LLM tooling.

EXPERIENCE

Analyst | Sveltoz Solutions Pvt. Ltd.

Aug 2025 – Present

- Led end-to-end requirement gathering and documentation (BRD, FRDs, user stories, acceptance criteria) for 3+ business applications, reducing rework by eliminating ambiguity before development.
- Developed interactive Power BI dashboards tracking 10+ KPIs using DAX and Power Query, giving business stakeholders a self-serve, weekly view into performance data in place of manual reporting.
- Designed and built an AI-powered HR Policy Assistant using a RAG architecture (LlamaIndex + LLM), cutting average policy-lookup time for internal users.
- Contributed core AI capabilities to a multi-agent, AI-powered HRMS platform — built face recognition-based employee registration and login (MTCNN + InceptionResnetV1 + Euclidean distance matching) and a browser-based voice interaction layer for hands-free system access.
- Automated 4+ recurring reporting workflows via Power Automate, removing manual report assembly and improving delivery turnaround for internal teams.
- Owned UAT, defect triaging, and solution verification across multiple sprints, logging and tracking issues in Jira through to resolution.
- Performed data extraction, cleansing, and validation using SQL and Python (Pandas), improving downstream data accuracy for reporting pipelines.
- Conducted client demos and requirement walkthroughs; produced process flows and DFDs that aligned business stakeholders and development teams on scope.
- Drove Agile ceremonies (sprint planning, stand-ups) and maintained requirement traceability across the full SDLC.

PROJECTS

AI-Powered HR Policy Assistant

Python · LlamaIndex · RAG · LLMs · Streamlit

- Architected and built an end-to-end RAG-based policy retrieval system — indexed policy documents, implemented semantic search, and integrated an LLM for context-aware, policy-aligned Q&A.
- Designed the document chunking and embedding pipeline, enabling accurate retrieval across 50+ policy pages with low hallucination rates.
- Delivered a Streamlit-based UI for internal users, reducing average policy-lookup time and dependency on the HR team for routine queries.

Customer Segmentation using K-Means Clustering

Python · K-Means · Pandas · Streamlit

- Built an end-to-end ML solution: performed EDA, feature engineering, and K-Means clustering to identify 4 distinct customer segments from transactional data.
- Developed an interactive Streamlit app visualizing cluster profiles and business interpretations, enabling marketing teams to target segments with tailored campaigns.

EDUCATION

2023-2025	Master of Computer Applications (MCA) at MES IMCC	GPA: 8.63/10
2020-2023	Bachelor of Computer Applications (BCA) at MES Senior College	GPA: 9.27/10

TECHNICAL SKILLS

- **Business Analysis:** Requirement Gathering, BRD/FRD, User Stories, Acceptance Criteria, Process Flows, DFD, UAT, Gap Analysis, Agile, Scrum, Jira, Stakeholder Management
- **Analytics & BI:** Power BI, DAX, Power Query, KPI Dashboards, SQL, PostgreSQL, MySQL, Data Cleaning, Data Modeling, Excel (Pivot Tables, VLOOKUP)
- **Programming:** Python, Pandas, NumPy, Streamlit, OpenCV, FastAPI
- **GenAI & AI:** LLMs, RAG, LlamaIndex, Prompt Engineering, Semantic Search, Face Recognition, MTCNN, InceptionResnetV1
- **DevOps & Automation:** Git, GitHub, Power Automate
